

ABSTRACT OF THE DISCLOSURE

An image processing method is performed by an image supply device
storing image data and an image output device performing image processing
5 with respect to the image data, which are connected via a communication path
through which the image data is communicated. A control information item
including a script for image processing, which is described by a markup
language, is communicated between the image supply device and the image
output device. The image data is transmitted to the image output device,
10 based on the script.
